Wine Tasting Dynamic Dshboard

MS Excel pivot table analysis of 130,000 records of wine tasting data set

It appears that as price of increases quality increases. With entire population this increase follows a logarithmic curve. This means even you pay a lot the increase in taste is very little. This data includes very high prices and very low number of tastings. With more than 500 tastings this increase appears to be linear. This means more you pay better the taste.

Top 10 countries by wine names

Number of tastings

(Australia, Argentina, Portugal, Italy, US)

Top 10 wine varieties

Number of tastings

(Rosé, Sauvignon Blanc, Bordeaux-style Red Blend, Cabernet Sauvignon, Pinot Noir)

Top 10 contries with highest average price of wine

(Australia, US, Hungary, Germany, Switzerland)

Average price with points

$$y = 8.3915e^{0.1653x}$$

Wine variety with price (out of more than 1000 tastings)

Legend: Average of Price — Average of Points — Linear (Average of Price)

Average points with price

$$y = 2.4785\ln(x) + 80.691$$

Price $

Average points with price (more than 500 tastings)

$$y = 0.1325x + 85.487$$

Price $

Five highest priced wines

ChÃ¢teau PÃ©trus 2011 Pomerol
Domaine du Comte Liger-Belair 2005 La RomanÃ©e
Blair 2013 Roger Rose Vineyard Chardonnay (Arroyo Seco)
ChÃ¢teau PÃ©trus 2014 Pomerol
Domaine du Comte Liger-Belair 2010 La RomanÃ©e
ChÃ¢teau les Ormes Sorbet 2013 MÃ©doc
